

# SMART KEY STORAGE SYSTEM

The **ProxerSafe®** system is to manage and store keys, devices, instruments, tools and documents in a **supervised, authorized and tracked way**.

If the task is to keep keys safely, the **KeySafe® Lock cabinets with RFID key plugs** are the right solution. If you need to store not only keys but also mobile devices, documents, valuables, tools, parts, then the **cabinets with boxes** are the best choice.

The cabinets can be opened with an RFID card, PIN code and/or biometric identification. To protect the keys and valuables from violent attacks, **the cabinets can be built into certified safes** (ProxerSafe® Security system).

The **KeySafe® Lock** cabinet locks each key individually and it **does not allow taking any keys only by those who have the rights to the given key**.

*How can I manage company car keys easily and safely?*

*Can I handle the keys of hundreds of rooms without constant receptionist supervision?*

*Who has the key to the warehouse?*

*Who used the forklift last?*

*Can I reserve the meeting room key for a given time?*

You can monitor and log who took and returned which keys and when. The key cabinets can be queried and managed remotely, integrated into a building management system, but they can also operate offline in stand-alone mode.

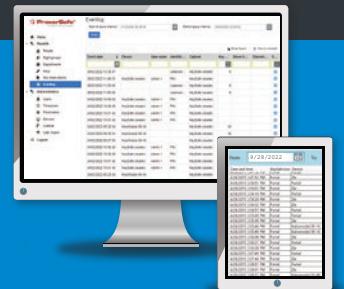

## FEATURES AND OPTIONS

- **RFID, PIN or biometric user authentication**
- Authorization can be granted or revoked per key and per user, even remotely
- The cabinet can be programmed and queried via the touchscreen of the built-in computer and/or remotely via the ProxerSafe® Web Access interface.
- **Multi-cabinet** key management, even **system-level management** of a cabinet network
- The built-in computer with touchscreen ensures offline, stand-alone operation in case of network failure
- **Key search** function
- **Logs on key and cabinet events**, booking information can be viewed on the screen
- At identification the user's photo is also displayed on the screen alongside the name
- **Alarms** and notifications can be set, the cabinet can be connected to the fire alarm system
- ProxerSafe® system can be integrated into the access control system
- Breathalyser – car keys can be taken only with negative test results

*Users can only retrieve the keys to which they are authorized.*

*It is possible to track who opened the cabinet when and which key was taken or returned.*
